## # Getting Started

```
#!/bin/bash

VAR="world"
echo "Hello $VAR!" # => Hello wo

Execute the script

$ bash hello.sh
```

```
NAME="John"

echo ${NAME}  # => John (Varia echo $NAME  # => John (Varia echo "$NAME"  # => John (Varia echo '$NAME'  # => $NAME (Exac echo "${NAME}!"  # => John! (Varia echo "${NAME}!"  # =>
```

```
# This is an inline Bash comment

: '
This is a very neat comment in bash '

Multi-line comments use :' to open and ' to close
```

```
$1 ... $9

Parameter 1 ... 9

$0

Name of the script itself

$1

First argument

${10}

Positional parameter 10

$#

Number of arguments

$$

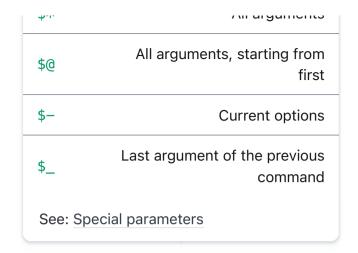

Process id of the shell
```

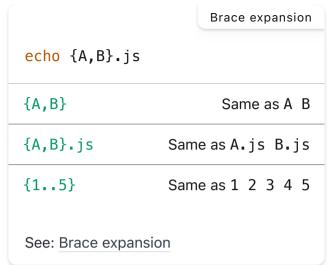

```
get_name() {
    echo "John"
}
echo "You are $(get_name)"

See: Functions
```

```
if [[ -z "$string" ]]; then
    echo "String is empty"
elif [[ -n "$string" ]]; then
    echo "String is not empty"
fi

See: Conditionals
```

```
# => I'm in /path/of/current
echo "I'm in $(PWD)"

# Same as:
echo "I'm in `pwd`"
```

# Bash Parameter expansions

	Syntax	
\${F00%suffix}	Remove suffix	
\${F00#prefix}	Remove prefix	
\${F00%%suffix}	Remove long suffix	
\${F00##prefix}	Remove long prefix	
\${F00/from/to}  Replace first match		
\${F00//from/to}	Replace all	
\${F00/%from/to}	Replace suffix	
\${F00/#from/to}	Replace prefix	
Subs	trings	
\${F00:0:3}	Substring (position, length)	
\${F00:(-3):3}	Substring from the right	
Length		
\${#F00}	Length of \$F00	
Default values		
\${F00:-val}	\$F00, or val if	

```
echo ${food:-Cake} #=> $food or
STR="/path/to/foo.cpp"
echo ${STR%.cpp}
                   # /path/to/f
echo ${STR%.cpp}.o
                   # /path/to/f
echo ${STR%/*}
                   # /path/to
echo ${STR##*.}
                   # cpp (exten
echo ${STR##*/}
                   # foo.cpp (b
echo ${STR#*/}
                   # path/to/fo
echo ${STR##*/}
                   # foo.cpp
```

echo \${STR/foo/bar} # /path/to/b

Substitution

```
Slicing
name="John"
echo ${name}

Glob options

## # Bash History

	Commands
history	Show history
sudo !!	Run the previous command with sudo
shopt -s histverify	Don't execute expanded result immediately

		Expansions
!\$	Expand last parameter of most rece	nt command
!*	Expand all parameters of most rece	nt command
!-n	Expand nth most rece	nt command
!n	Expand nth comma	nd in history
! <command/>	Expand most recent invocation	of command <command/>

	Operations
11	Execute last command again
!!:s/ <from>/<t0>/</t0></from>	Replace first occurrence of <fr0m> to <t0> in most recent command</t0></fr0m>
!!:gs/ <fr0m>/<t0>/</t0></fr0m>	Replace all occurrences of <fr0m> to <t0> in most recent command</t0></fr0m>
!\$:t	Expand only basename from last parameter of most recent command
!\$:h	Expand only directory from last parameter of most recent command
!! and !\$ can be replaced with any valid expansion.	

	Slices
!!:n	Expand only nth token from most recent command (command is 0; first argument is 1)
i,	Expand first argument from most recent command
!\$	Expand last token from most recent command
!!:n-m	Expand range of tokens from most recent command
!!:n-\$	Expand nth token to last from most recent command
!! can be replaced with any valid expansion i.e. !cat, !-2, !42, etc.
